

Product screens — design brief

Every screen the product pages need, which page it goes on, and where on that page it appears. Generated from the site's own content data, so it cannot drift from what the pages render.

117 screens across 25 pages. 6 are phone screens; the rest are desktop. None of them exist yet. The site holds 17 product captures already, but not one of them is a screen named below, so every frame on every product page is currently an empty placeholder.

Where these appear

Each product page has two places a screen shows up:

- **§6 “Product screens”** — a gallery near the bottom of the page. Every screen listed here appears in it.
- **§5 capability deep-dives** — four large alternating blocks higher up. Each block is captioned with one screen name; that screen does double duty and is the more prominent of the two placements.

The “Where it appears” column tells you which. Screens marked **§5 ... only** are captioned on a capability block but are missing from the §6 list in the source document — worth capturing regardless.

Delivery spec

	DESKTOP SCREENS	PHONE SCREENS
Aspect	16:10	portrait, any ratio
Pixel size	1600 × 1000	~1170 × 2532 (device native is fine)
Format	WebP	WebP
Target weight	under 150 KB	under 120 KB

1600 × 1000 matches the 17 captures already in `public/product/`, so please keep it exact — the site sets explicit width/height on these images and a different ratio will shift the layout.

Chrome: don't draw a browser window, title bar or phone bezel. The site wraps every screen in its own frame. Deliver the viewport contents only.

Content: use realistic but non-identifying data. No real employee names, photos, or customer logos. Numbers should be plausible rather than flattering — these sit next to copy that avoids unverified claims.

Naming: the “Deliver as” column gives the exact path, e.g. `employee-wellbeing-culture/wellbeing-risk-dashboard.webp`. Folder per page slug, kebab-cased screen name. Getting this exact matters: a screen is wired to its frame by name.

Priority

Suggested order, since 117 is a lot:

- 1. **The four \$5 capability screens on each page** — the largest, highest-traffic placement.
- 2. **Phone screens** (6 total) — the only ones that prove the mobile product exists.
- 3. Everything else, page by page.

If you want to sequence by traffic rather than by layer, ask the team for analytics first — this brief is generated from content data and has no visit numbers behind it.

Workforce Experience
